

Claim of the Invention

I, Dennis M. Dearie, claim that I'm the sole designer and inventor of a portable, internet ready, barcode reader that is used to scan inspection stickers placed on the inside windshield for the purpose of validating compliance with mandatory insurance laws. Installing a PC Card into an open slot of laptops used by Police Officers then loading our software and configuring the internet radio in a wireless portable barcode reader allows the user to scan the barcode from outside of his patrol car. Coordinating insurance companies and inspection stations makes it possible for Police Officers to verify compliance to mandatory insurance laws in "Real-Time". With the system in place it is possible to check for insurance coverage without an operator inside the vehicle. By using our I.V.S. system it is possible for any insurance company to log on to the server and update any and all changes to an individuals insurance coverage.

Thank You,

A handwritten signature in cursive script, appearing to read "Dennis M. Dearie", is written over a horizontal line.

Dennis M. Dearie
